How to install your REMOVABLE CONTACT PAPER...just PEEL & STICK!

GETTING READY

MATERIALS

Dusting rag
Cleaning rag
Non-oil based cleaner, such as vinegar water
Scissors or Sharp utility knife

PREPARE YOUR CONTACT PAPER

Measure the area you'd like covered and unroll each roll, cutting to those measurements.

PREPARE YOUR SURFACE

The area you're applying your paper to should be smooth, clean and dust free. Clean surface with dusting rag, and then wipe down the area SUPER well with your non-oil based cleaner. Please note - if you use a cleaner with oil in it, the paper will not stick. Allow the surface to dry for a couple minutes after cleaning.

START APPLYING

REMOVING CONTACT PAPER BACKING

Starting from the top of the roll or trimmed piece, pull off about 6" - 8" of the backing from the contact paper.

APPLYING CONTACT PAPER

Pick up your first piece and apply the un-peel portion, smooth out any air bubbles with your hands or a paddle-like tool (such as a credit card). Once securely applied, start pulling more of the backing off in sections, firmly pressing the contact paper on the surface, smoothing out air bubbles as you go. Continue pulling off and pressing the paper down until done. If you have excess paper, simply trim carefully with a utility knife or scissors.

If you accidentally place your contact paper incorrectly, no problem! The contact paper is repositionable on most surfaces, and you can simply pull it off CAREFULLY and SLOWLY. Then press it down again. When you want to remove your contact paper completely, simply peel off slowly.

Thank you again for your purchase!
